

Essentials of Musculoskeletal Ultrasound 2023

15 - 16 May 2023

14 - 15 August 2023

5 - 6 October 2023

Differentiate musculoskeletal injury from arthritic change and manage your patient's problem today. Guide common injections and get better treatment outcomes for your patients.

On completion of this two-day clinically focused musculoskeletal ultrasound course, learners will be able to:

- Use ultrasound system controls to optimise imaging for accurate diagnosis
- Develop proficiency in probe manipulation to efficiently acquire diagnostic images
- Describe the limitations and clinical integration of the following ultrasound examinations: Common extensor tendon, Shoulder joint, Achilles tendon, Quadriceps tendon, Plantar fascia, Gastrocnemius muscle, Patella tendon
- Use a systematic approach to conduct ultrasound assessment of: Gross muscle tears, Bursitis, Joint effusions, Tendon injury, Fractures
- Demonstrate ultrasound-guided needle placement in- plane and out of plane for musculoskeletal injections as practiced on ultrasound simulators
- Describe the optimum patient positioning and needle approach for common injections
